Bulk Disbursement API

0. Documentation

Date: June 05, 2024

Version: 2.0

1. Abbreviation

BKTH: BKTecHouse

2. Architecture

The following services will be used to facilitate the integration process with the third-party interface:

ITEM	SERVICE	DESCRIPTION
(1)	Initiate Bulk Disbursement	API to be used to create new bulk disbursement
(2)	Check Transaction	API to check transaction whether it is successful, pending or failed
(3)	Check Transfer	API to check if beneficiary received funds or not
(4)	Callback Notification	API to be used to send callback notification when transfer sent successfully or failed to beneficiary.

		And when transfer was transferred from source of funds wallet/bank to destination
(5)	Check Balance of Wallet	API to check balance of your (merchant) wallet

3. APIs

Our APIs run on two environments. **Staging** and **Production**

Staging Base Url: https://staging.urubutopay.rw

Production Base Url: https://urubutopay.rw

"disbursement_status": "NOT_STARTED / FULL_SUCCESS / PARTIAL_SUCCESS"

}

}

Failed Response:

{

"status": "401",

“message”: “Unauthorized access”

}

{

“status”: “400”,

“message”: “Validation Failed”,

“validation”: {

“body”: {

“source”: “body”,
“keys”: [“source_payment_channel”],

“message”: “source payment channel is required”

}

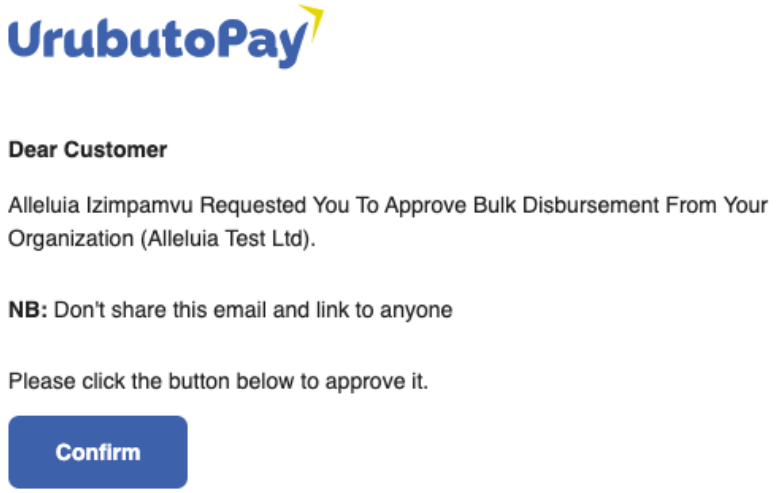
}

}

3.1.1 MOMO Approval Process

If the source payment channel is MOMO, the approver will receive email notification requesting approve transfer.

The email will look like this



UrubutoPay

Dear Customer

Alleluia Izimpamvu Requested You To Approve Bulk Disbursement From Your Organization (Alleluia Test Ltd).

NB: Don't share this email and link to anyone

Please click the button below to approve it.

Confirm

Then from email notification, approver will be redirected to UrubutoPay to confirm transfer.
